GoToMyPC™

Like being there.

Unprecedented

Unprecedented Access

Secure, on-the-fly remote access to all of your computer files, programs and resources from anywhere has been impossible. Until now.

GoToMyPC expands the possibilities of remote PC access, making it easier, less expensive and more functional. GoToMyPC is a Web-based service that works through firewalls and without the need for preinstalled client software – a completely new solution for your remote-access needs.

“GoToMyPC is revolutionary.”

- PC MAGAZINE, MARCH 2001

Ultimate

The Ultimate Mobility

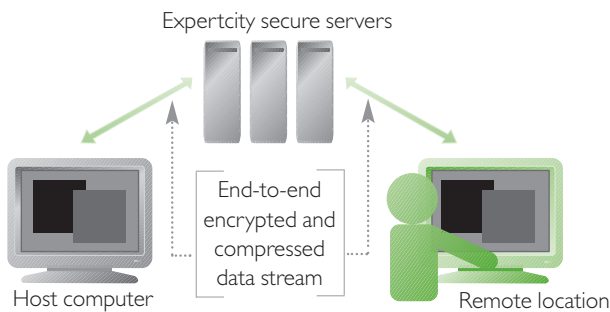

Securely and easily access your computer from anywhere. With GoToMyPC, working remotely is just like being there:

- Fast:** GoToMyPC can be installed and ready to use in minutes. Proprietary compression technology ensures superior performance.
- Easy:** Setup is quick and intuitive. Users work on their remote computer to access their files, programs and network resources in the same manner as they would locally – no training or support required.
- Secure:** GoToMyPC is completely secure with nested passwords, an SSL-protected Web site, end-to-end authentication and AES (Advanced Encryption Standard) encryption using 128-bit keys.

How It Works

Users register their computers in just minutes by downloading and running the small GoToMyPC installer on the computers they want to access. When users want to work remotely, they log in to GoToMyPC.com and select the computer they want to work on. A small Viewer plug-in launches and prompts users for an access code before allowing them to see and access all the applications and resources on their desktops. They simply work on their computers as if they were sitting in front of them – through any Web browser.

GoToMyPC works by using the Internet, Expertcity-hosted secure servers, and Expertcity patent-pending screen-sharing technology to let users connect to their computers from any Web browser.

Features

GoToMyPC is easy to set up and has an intuitive interface with complete keyboard and mouse control of the computer being accessed. Features include:

Resizable Viewer:

View image of the computer in full screen, actual size or percentage of scale.

File transfer:

Transfer files between computers faster and more easily.

Guest access:

Invite a second person to temporarily view or share control of your computer.

Remote printing: Print from the host Viewer window to your local client printer.

Cut and paste:

Cut, copy and paste text between computers.

Collaboration features:

Communicate on-screen with text chat and draw.

Encryption:

AES encryption using 128-bit keys to protect data stream, file transfers, chat and keyboard and mouse input.

Password protection:

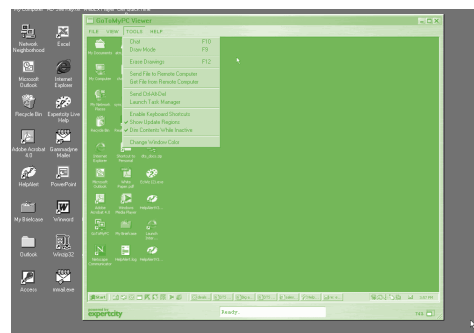

Dual passwords and end-to-end user authentication. The access code resides on the host computer and is never transmitted or stored on GoToMyPC servers.

Additional security:

Inactivity timeout. Lockout protection. Option to blank out the screen of the computer being accessed and/or disable its keyboard and mouse. Log of previous connections.

Platform compatibility:

Supports Windows 95, 98, Me, 2000, NT and XP. Support for Mac, Linux, Solaris, Windows CE and Palm to be added in future releases. View Windows-based PCs from any Windows, Mac or Unix-based computer.

The Viewer window displayed on the local, or client, computer shows the desktop of the remote, or host, computer.
